

ZIPWALL™

Zipwal™ is ideal for:

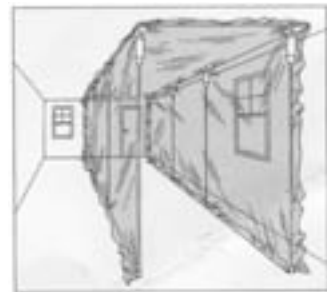

- Floor finishing
- Carpentry
- Painting
- Demolition
- Asbestos abatement
- Window installation

Zipwall is a Unique dust control system that can save you hundreds of hours on all kinds of remodeling jobs: carpentry, floor finishing, wall and ceilings, painting, sheetrock work, asbestos or lead paint abatement, demolition ... whenever dust protection is needed.

Goes up in less than 5 minutes. One person can put up a 20-foot long Zipwall dust barrier in less than 5 minutes. Using the telescoping, twist lock Zipwall poles topped with the patented Zipwall Jack, you simply screen off your work area with any plastic sheeting, canvas tarp, dropcloth, etc.

Locks in place.
The Zipwall Jack locks the screening material firmly against the ceiling. The foot of the pole keeps it snug against the floor. It's so simple to install, you could put up four walls around the job site in just a few minutes. No special training needed. The reusable poles and jacks are made of the most durable materials available.

Pays for itself in 2 or 3 jobs!
For many contractors, ZipWall will pay for itself in less than a month. It even lets you take on jobs you might have turned down because of dust control costs.

EA	12'	ZIPWALL

How Zipwall works:

1. After attaching jack to pole, unlock plate on jack by sliding pegs into large holes on head. Remove plate from head.

2. Place plastic sheeting on head. Use pegs on plate to push plastic into large holes on head. Lock by sliding pegs into the small holes.

3. Unlock pole by turning inner pole counter-clockwise.

4. With foot of pole on ground, extend pole up so that the plate is pressed against the ceiling by spring action of the jack. Turn pole extension clockwise to lock it.

5. Check fit of plastic against the ceiling. If it droops, loosen extension pole and move to a position that pulls the plastic tight. Note: Entire wall must be secured at top before securing bottom.

6. Raise pole and pull plastic sheeting under foot to make a tight fit along the bottom of the wall.

DOWELS/PLASTIC SHEETING

MILLER DOWELS

Miller Dowels are available in a variety of woods and sizes. Miller Dowels...superior fasteners for solid wood joinery.

MINI X DOWEL AND BIT SET

Includes

- MINI X Dowel - Dowel Length: 1 5/8" Cap Diameter: 1/4". For joining wood up to 3/4" in. thick.
- MINI X TruFit™ Bit - Shape and size of TruFit™ drill bit matches dowel perfectly.
