

PLYWOOD SIDING

32

Versatile, economical, and relatively easy to install, plywood siding has been used for decades. We proudly stock K-Ply's Western Red Cedar plywood siding and Roseburg Forest Products' Breckenridge plywood siding.

K-Ply panels feature a naturally durable western red cedar face and back. Our stock grade is 303:18S which allows up to 18 small solid knots and/or knot holes that have been filled with a cedar-toned filler. Panels with clear faces are available on a special order basis. Beronio Lumber also carries K-Ply's unique Panel 4 which features a face composed of 4-inch-wide clear red cedar strips. Panel 4 offers the look of 1 x 4 T&G lumber siding with the installation ease of plywood.

Breckenridge is Roseburg Forest Products' premium grade plywood siding. Produced from selected face veneers with specific grain characteristics, it stands apart from typical Douglas Fir plywood siding. The carefully selected faces create a dimensionally stable panel that has no major visual distinction between sapwood and heartwood, resulting in a more uniform grain that enhances the appearance and longevity of applied finishes. For best performance, Roseburg recommends that the siding be finished with a solid color acrylic coating. Among all of the wood-base sidings, plywood siding is the most maintenance-intensive.
