

BISON LEVEL-IT

BISON LEVEL.IT IPÉ DECK TILES

DT1-7 1.65" x 24" x 24" Bison Ipé Deck Tile

The Bison Level.It® deck tile is a premium grade deck ideally suited to raised and roof deck applications. The tiles are assembled using kiln dried 1x4 faces fastened to 3 Ipé runners with stainless steel screws. They are strong, stable and very sound under foot. The natural durability, fire resistance and density of Ipé lumber coupled with the high quality construction make these tiles suitable for both residential and commercial use.

These Bison pedestals have a broad footprint that installs easily on most substrates, and can be placed directly on top of roofing and waterproofing systems. The Bison Level.It system can handle a height range from 1/2" to 10" (with extensions).

BISON LEVEL.IT Adjustable Pedestal System

Adjustable Bison Level.It® deck supports create beautiful decks on rooftops, on grade, or over cracked concrete patios. Use Level.It supports to construct unique deck designs with a variety of materials: wood tiles, natural stone, concrete pavers, composites or wood planking over traditional wood stringers. Mix and match materials for a truly unique deck!

Use Level.It pedestals to elevate the deck above roof penetrations and allow water to drain to the substrate below. The Level.It system makes routine roof maintenance easy to perform. Level.It decks also provide ventilation and protection from ultraviolet effects, helping to prolong roof membrane life.

Level.It deck supports have a broad footprint that installs on almost any substrate. Without attachment to the membrane, Level.It deck supports can be placed directly on top of roofing and waterproofing systems with no insulation.
