Composite Deck Painted Screws

SIMPSON HANGERS

We carry a full line of Simpson Hangers

Please note that either ZMAX plated, Hot Dipped Galvanized or Stainless Steel should be used for wood in contact with pressure treated framing

PROTECTO SEAL 45

- Eliminates wood to wood contact
- Forms seal around fasteners and prevents water from entering through the top of the joist.
- Simple peel and stick installation
- Available in Silver or Black

FINISHES

Penofin Hardwood Formula Oil

Penofin offers a complete system for coating hardwood decking starting with 1st Step Prep for hardwoods that is used to clean and open the pores of the new wood for coatings, preparing it for finishing. The Hardwood Finish is formulated to better penetrate dense hardwoods with sustainably harvested Brazilian Rosewood Oil. The oil helps maintain the original color and provides UV protection. Properly applied, Penofin allows periodic reapplication. Specific instructions can be found at www.penofin.com

Armstrong-Clark

Armstrong-Clark is a California produced, environmentally friendly oil based wood stain with 68% of their ingredients coming from renewable and recycled items. Armstrong-Clark has non-drying conditioning oils that separate from the drying side of the formula. These oils penetrate deep into the wood fiber where wood's natural oils used to be. The process helps rejuvenate the wood. The drying oils stay at the surface, lock in the conditioning oils and create a dry to the touch barrier. It is relatively easy to both apply and reapply and leaves the wood looking beautiful.

Sansin

The Sansin line of finishes was developed to meet the demanding requirements of log homes. We first became impressed with their quality based on our experience with our yard displays. Sansin Enviro stains are unique in that they offer the benefits of oil with the ease of water clean up. They have a number finishes that are ideally suited to a wide range of applications. SDF is a one, or two, coat system that is great for softwood siding, decking, and fencing. DEC, a two coat system, is the ideal choice for softwood decking or fencing and offers easy application and excellent service life. Classic UV Topcoat is a one coat system that Sansin suggests for hardwood decking. They also offer a Clear Wood Sealer that is a great choice when you want the deck to weather out cleanly but still desire some protection from water penetration.

Eco Wood Treatment

ECO Wood is a unique wood treatment whose roots go back centuries to an old Scandinavian formula. ECO Wood is a powder that is dissolved in water to create a solution that draws the tannins out of the wood in order to give the wood a uniform "weathered" look. It uses have ranged from Canadian National Parks and marinas to vegetable gardens and bee hives. Its effect is dramatic on Redwood, Red Cedar and Port Orford. It is a one-time application that improves appearance with age. It's a great choice for Port Orford Cedar because it gives the wood a uniform appearance and lessens the "spotting" problem that occurs as the wood goes through the aging period.
