

HARDWOOD

Premium KD Ipé

IPE14M	1 x 4	Max S4S (13/16" x 3-1/2")
IPE14G	1 x 4	Max Grooved (13/16" x 3-1/2")
IPE16M	1 x 6	Max S4S (13/16" x 5-1/2")
IPE14G	1 x 6	Max Grooved (13/16" x 5-1/2")
IPE56	5/4 x 6	S4S (1" x 5-1/2")
IPE56K	5/4 x 6	Grooved (1" x 5-1/2")

Ipé is a dense, hard, strong and extremely durable hardwood that has the potential to last generations. We yard Ipé in a variety of sizes in a premium kiln dried grade in both S4S and grooved profiles. This remarkable wood is slip, rot, termite and fire resistant, and is frequently the wood of choice for the most demanding commercial projects. Where possible, we feature Mataverde© brand lumber. Mataverde Ipé Max is 21mm (13/16+") thick and is a great alternative for many residential projects. (21mm grooved limited to 16" oc span and 24" ground clearance).

PROS: Longest service life for wood decking, rot and fire resistant, stable.

CONS: Dense, requires carbide tooling and predrilling, some face checking, requires more frequent finishing than softwoods to keep walnut color, expensive.

DM56

5/4 x 6 Mataverde® Premium Machiche

Mataverde Machiche is an FSC certified premium hardwood decking that offers solid performance characteristics. While not quite as dense as Ipé or Cumaru, Machiche is nearly twice as dense as Red Oak. It is long wearing, has excellent stability and rot resistance. Machiche has a rich brown color and the grain recalls Teak in its open texture. It is also very stable. Mataverde wood is kiln dried as sourced from the finest Lonchocarpus Castilloi logs.

PROS: FSC Certified, stable, long wearing, clean weathering, good value.

CONS: Tallies run heavy 8' to 11', limited availability of long lengths.
